

Our Milestone

Crucible Aluminium Alloy T4 Heat Treatment Furnace

Crucible Aluminium Alloy T6 Heat Treatment Furnace

Billion Fortune Sdn. Bhd. was incorporated since 1994 in Malaysia, a private limited company in metal-based industry. Presently we provide metal components and T4 / T6 Aluminum heat treatment services to the manufacturing sector in various industries with our integrated facility of metal forming, mould & die design and fabrication, and precision machining. Our wide ranges of efficient metal forming machines are equipped with the capability to carry out stamping, forging and multi-forming processes. The tonnage capacity of these machines range from 16 to 400 metric tonnes, enabling them to produce a variety of metal press components. We also provide in-house secondary process such as tapping, grinding, sand blasting, buffing, sport welding & argon welding.

Billion Fortune Sdn. Bhd. is currently operating on two factory premises in Pontian, Johor with build-up area of approximately 45,000 sq. ft., housing all our manufacturing capabilities.

We has a strong team of professional, committed and highly trained workforce to handle all phases of production from design and fabrication of mould, mass production of stamping & forging, R & D and quality

We are specialized in

- T4 / T6 Aluminum Heat Treatment;
- Cold and Hot Forging for Aluminum, Copper & Steel Parts;
- Precision Metal Stamping Production;
- Design and Fabrication of Mould;
- R & D on Joint New Product Development;
- Turn-Key Project;
- Precision Machining
- Proto Type, Small Lot, Low Volume Quantity Parts, is warmly welcome.

Quality Policy

We place strong emphasis in manufacturing and supplying high quality products to our customers in order to achieve total customers satisfaction. We will deliver products & services that meet all relevant requirements on time & by doing right the first time. This shall be achieved though total commitment of complying with the ISO9001 requirement, customer requirement, statutory and regulatory requirement and continual improvement of the effectiveness of the company quality management system that embrace all the operations and function of the company. We will continually review and improve the effectiveness of our quality management system to remain current and competitive.

Our production team is trained to operate the machines with adherence to safety standard requirements as well as maintain the machines so as to maximize its performance, thus achieving a high level of quality and
